

# CASE STUDY – HVAC SERVICES

## Coil replacement

Gibbons HVAC Services is vastly experienced in the design, repair and replacement of heating, cooling and frost coils.

We supply coils both complete and in kit form for situations where there's restricted access. This is often as a result of AHUs being installed in buildings with no space to allow larger components to be replaced later.

Kit-form coils are brought to site as finned tubes and blocks. These are built within the confines of the AHU before being fully pressure tested and certificated by our engineers for complete peace of mind.

Here's how a Gibbons coil service can benefit you:

- Minimises AHU downtime
- Eliminates the need for manufacture of complete AHU sections
- Reduces builders' work
- Coils can be installed in locations that would otherwise not be feasible
- Like-for-like coil manufacture (even when the original spec is not known)
